

Weekly Basket — April 20, 2026 Entry

GSRS: 2.6 | Radars: Clean | Cash Needed: ~\$110,000

Disclaimer: I am not a financial advisor, registered broker, or investment professional. This is not financial, tax, legal, or investment advice. Naked call and naked put selling with aggressive sizing up to 5%+ of account equity per name carries extreme risk of rapid, total, or greater-than-account loss, including on surprise acquisition gaps (call side), regulatory or fraud gaps (put side), short squeezes, or systemic market crashes. Past performance in any backtest does not predict future results. Always verify every price, chain, margin requirement, and order live on your broker platform before submitting any real trade. You alone are responsible for execution, margin calls, regulatory compliance, taxes, and all outcomes. Test every concept in a paper account first.

Market Conditions at Entry

- **GSRS:** 2.6 (0–3 range: full aggressive 5% sizing both sides; doubles enabled on both sides)
- **VIX:** 17.48 | **SKEW:** 141.82 | **HY OAS:** 2.86% (5yr avg 3.59%) | **MOVE:** 65.69 | **P/C Ratio:** ~0.55 (est.)
- **SPY:** \$710.14 (within 0.3% of 52w high \$712.39) — **SPX at all-time highs**
- **Acquisition Radar:** Clean (no credible takeover signals on call-side names)
- **Downside-Gap Radar:** Clean (CLF + AAL have earnings INSIDE the week and were excluded; FIG near recent IPO excluded)
- **Week-over-week change:** GSRS compressed further 3.5 → 2.6 (VIX 19→17, MOVE 72→66, HY OAS 2.90→2.86). Risk environment has continued to normalize. **Both sides now run full 5% sizing with doubles enabled** — first time since late 2025.

GSRS Calculation Detail

Component	Value	Normalized (0–10)	Weight	Contribution
VIX + 1d change	17.48 (−0.46)	1.96	40%	0.78
CBOE SKEW	141.82	4.20	20%	0.84
HY OAS vs 5yr avg	2.86% vs 3.59%	2.30	20%	0.46
MOVE Index	65.69	1.57	10%	0.16
Equity P/C Ratio	~0.55	3.50	10%	0.35
GSRS Total			100%	2.59

CALL SIDE — Full 5% Sizing (~\$55,000 margin per name)

Ticker	Price	ATM HV IV	Rank	SI % Float	Fan Score	Glassdod	Buyback	Strike Exp	Δ est	Est. Credit	Contracts	Margin #1	Break #2
GTLB	\$21.42	74%	84th	~9%	4.0	4.3	0	\$27 Call / Apr 24	~0.18	\$0.57	170	~\$55,600	\$27.00
DOW	\$35.60	68%	57th	~5%	4.5	3.5	+1 (paused)	\$44.50 Call / Apr 24	~0.18	\$1.07	100	~\$55,200	\$44.00
DBX	\$24.27	53%	100th	~6%	5.0	3.9	0	\$28 Call / Apr 24	~0.18	\$0.47	170	~\$55,600	\$28.00
HIMS	\$28.82	102%	46th	~25%	6.0	2.9	0	\$33 Call / Apr 24	~0.18	\$0.52	140	~\$53,500	\$33.00

Call-side subtotal: ~\$219,900 margin | ~\$35,660 total credit | ~5,100 daily theta (~\$5,100)

Thesis Signals (Call Side)

- **GTLB:** Fan 4.0 (pass — enterprise DevOps slowdown), SI ~9% (pass), Glassdoor 4.3 but CEO-approval trending down (marginal), Buyback 0 (pass), Acq radar clean (pass), 8 consecutive quarters of declining NRR, 52-week lows last week, multiple recent downgrades to Neutral/Underperform, AI-native DevOps competition (Cursor/Cline) eating into TAM — 5/5 bearish
- **DOW:** Fan 4.5 (pass — chemicals demand soft), SI ~5% (low squeeze risk, pass), Glassdoor 3.5 (pass), Buyback paused amid \$2.6B 2025 loss (pass), Acq radar clean (pass), 4,500 job cuts announced (12% of workforce), ethylene margin compression, China oversupply — 4/5 bearish
- **DBX:** Fan 5.0 (pass — mature, no growth), SI ~6% (pass), Glassdoor 3.9 (marginal), Buyback 0 but CEO insider-selling recently (bearish overlay, pass), Acq radar clean (pass), analyst downgrade + flat revenue guide + aging consumer storage market — 4/5 bearish
- **HIMS:** Fan 6.0 (pass — GLP-1 litigation overhang), SI ~25% (elevated — squeeze-risk flagged), Glassdoor 2.9 + CEO approval 29% (pass), Buyback 0 (pass), Acq radar clean (pass), Novo Nordisk trademark litigation, FTC compounded-GLP1 enforcement (~\$65M annual revenue hit), CFO departure, insider selling — 5/5 bearish but **SI-squeeze hazard**

Call-Side Notes

- **GTLB** strongest conviction — already in a downtrend, strike is 4.4× ATR away (\$5.58 cushion), multiple confirming fundamentals. Even a 2-sigma rally keeps strike safe.
- **DOW** is the safest buffer (4.1× ATR, \$8.90 cushion) — large-cap cyclical will not move 25% in a week absent macro shock. Credit-rich (\$1.07).
- **DBX** has the best ATR buffer (5.0×). Stagnant revenue means low upside surprise risk. Small credit (\$0.47) but very safe.
- **HIMS** highest IV-crush opportunity (102% ATM IV) but tightest buffer (2.3× ATR) and highest SI. Size is modestly trimmed from 5% to 4.3% on squeeze-risk flag.

PUT SIDE — Full 5% Sizing (~\$55,000 margin per name)

Ticker	ATM Price	HV IV	SI % Float	Fan Score	Glassdoor	Buyback	Strike Exp	Δ est	Est. Credit	Contract	14d Margin	ATR	Buffer
PL	\$38.48	98%	85th	~4%	8.0	3.8	warrant buyback Put / Apr 24	\$35 0.18	~	\$0.75	110	~\$54,700	3.45 1.0× ATR (be- low 2× tar- get — flagged)
SMR	\$12.65	105%	51st	~20%	7.5	3.8	0	\$11.50 Put / Apr 24	~	\$0.25	340	~\$55,400	1.01 1.1× ATR (be- low 2× tar- get — flagged)

Ticker	Price	ATM IV	HV Rank	SI % Float	Fan Score	Glassdoor	Buyback	Strike k Exp	Δ est	Est. Credit	Contract	14d Margin	ATR	Buffer
LUNR	\$27.58	104%	88th	~5%	8.0	3.7	0	\$25 Put / Apr 24	~ 0.18	\$0.58	150	~\$52,800	\$2.49	1.0× ATR (below 2× target — flagged)
RIOT	\$18.11	81%	55th	~14%	7.0	3.6	0	\$16.50 Put / Apr 24	~ 0.18	\$0.29	240	~\$55,200	\$1.26	1.3× ATR (below 2× target — flagged)

Put-side subtotal: ~\$218,100 margin | ~\$32,410 total credit | ~4,630 daily theta (~\$4,630)

Thesis Signals (Put Side)

- **PL:** Fan 8.0 (pass — \$900M backlog, 50% YoY defense growth), SI ~4% (low, pass), Glassdoor 3.8 (pass), Buyback (warrant buyback at \$0.01 post-Apr 27, pass), Gap radar clean (pass), €240M Germany contract + Sweden 9-figure + NATO awards ongoing, Needham Buy \$40, Wedbush \$40, Morgan Stanley EW \$35 — 5/5 bullish
- **SMR:** Fan 7.5 (pass — AI data-center nuclear thesis), SI ~20% (squeeze fuel, pass), Glassdoor 3.8 (pass), Buyback 0 but Fluor reducing overhang via \$1.35B stake sale (pass), Gap radar clean (pass), TVA ENTRAI 6 GW deployment, Ebara-Elliott partnership, BofA upgrade to Neutral PT \$28 (+42%), White House space-nuclear initiative — 5/5 bullish
- **LUNR:** Fan 8.0 (pass — lunar lander leader), SI ~5% (pass), Glassdoor 3.7 (pass), Buyback 0 (pass), Gap radar clean (pass), just won NASA IM-5 Nova-D \$180M contract, 2026 revenue guidance \$900M–\$1B (vs \$210M 2025), Roth Capital Buy PT \$35 (+27%) — 4/5 bullish (execution on scale-up is key risk)
- **RIOT:** Fan 7.0 (pass — BTC + AI pivot), SI ~14% (squeeze fuel, pass), Glassdoor 3.6 (pass), Buyback 0 (ATM offering for capex, pass), Gap radar clean (pass), AMD \$311M 10yr data-center deal, 26% YoY hashrate growth, 600 MW AI capacity target by 2027, Corsicana ramping — 4/5 bullish

Mean-Reversion Buffer (Put Side) — BELOW 2× ATR TARGET

Ticker	Price	Strike	Distance	2× ATR Requirement	Buffer Met?	POT Est.
PL	\$38.48	\$35	\$3.48	\$6.90	NO — 1.0× ATR	~26%
SMR	\$12.65	\$11.50	\$1.15	\$2.02	NO — 1.1× ATR	~28%
LUNR	\$27.58	\$25	\$2.58	\$4.98	NO — 1.0× ATR	~27%
RIOT	\$18.11	\$16.50	\$1.61	\$2.52	NO — 1.3× ATR	~25%

Buffer override rationale: VIX 17 + SKEW 141.82 means OTM put premium is historically rich (skew is at 90th percentile of 5yr range). No weekly strike at 2× ATR offers acceptable delta-0.18 premium in this regime. These are delta-0.18 short puts — expected probability of touch ~25–28%, probability of finishing in-the-money materially lower. If a name prints below its 1× ATR stop, the management protocol (defensive roll or exit at 25% loss) takes over before strike is ever touched. Put-side doubles ENABLED (GSRS 2.6 < 3.0) — any double-down fills at improved strike/credit on next morning's open.

Put-Side Notes

- **PL** strongest conviction — \$900M backlog locked in, defense/intel demand is structural, multiple analysts with \$35-40 PTs provide a soft floor around the strike.
- **SMR** highest credit/margin ratio (4.5%). 20% SI gives squeeze-up optionality. Earnings May 7 = OUTSIDE the week, no binary event risk.
- **LUNR** just won NASA \$180M contract (Mar 2026) — the news is out, risk of new negative headline is modest; guidance \$1B revenue 2026 provides narrative support.
- **RIOT** earnings 4/30 = OUTSIDE the week. BTC correlation is primary driver; monitor BTC alongside RIOT.

PORTFOLIO SUMMARY

Metric	Value
Total names	8 (4 call + 4 put)
Total margin	~\$438,000 (43.8% of \$1M account)
Cash needed (4× leverage)	~\$110,000
Total estimated credit	~\$68,070
Daily theta (est.)	~\$9,730 (0.97% of account)
Max sector concentration	Crypto/Miner at ~12.5% (RIOT put only); Space at ~25% (PL + LUNR puts) — under 50% limit
GSRS regime	Full 5% both sides, doubles enabled — most aggressive stance since late 2025

Target weekly gross: ~\$68K if all expire worthless (6.8% on equity, 1.36% daily) **Profit-taking rule:** Close each position at 50–70% credit capture OR close EVERYTHING when \$10,000 daily profit target is reached (whichever first).

PRICE ALERTS (Double-Down Protocol — Both Sides Enabled at GSRS 2.6)

Call-Side

Ticker	Alert #1 (Break #1 — Double)		Alert #2 (Break #2 — Double & Exit)	
GTLB	Stock	\$26.50	Stock	\$27.00
DOW	Stock	\$43.50	Stock	\$44.00
DBX	Stock	\$27.50	Stock	\$28.00
HIMS	Stock	\$32.50	Stock	\$33.00

Put-Side

Ticker	Alert #1 (Break #1 — Double)		Alert #2 (Break #2 — Double & Exit)	
PL	Stock	\$35.50	Stock	\$35.00
SMR	Stock	\$11.75	Stock	\$11.50
LUNR	Stock	\$25.50	Stock	\$25.00
RIOT	Stock	\$16.75	Stock	\$16.50

Doubles now ENABLED on both sides — first time in 4+ weeks. Doubles are executed AT MARKET OPEN next trading day after alert trigger (not intraday).

HARD STOPS

- 25% loss on any single name → close that name
- 30% total portfolio drawdown → close EVERYTHING
- Any acquisition radar signal (call side) → IMMEDIATE FULL EXIT on that name
- Any downside-gap radar signal (put side) → IMMEDIATE FULL EXIT on that name
- SMR or RIOT breaches 1× ATR intraday → defensive roll or exit (buffer-override discipline)
- VIX closes above 25 → reassess put side, consider taking profits early

PROFIT TARGETS

- Close each position at 50–70% of collected credit
- OR close EVERYTHING when daily 1% account gain target (\$10,000) is reached (whichever first)
- **Expected 50% credit capture day:** Wed Apr 22 (T+2)
- **Expected 70% credit capture day:** Thu Apr 23 (T+3)

CHANGES FROM LAST WEEK (April 13 Basket)

Entire 8-name roster rotated — no overlap with Apr 13 basket. Reasons:

Last Week (Apr 13 → Apr 17 exp)	Outcome	This Week Replacement	Rationale
HIMS \$21C	retained thesis, higher strike	HIMS \$33C	Stock now \$28.82 (was \$19.43). GLP-1 lawsuit + FTC enforcement still driving. Strike walks up with price.
LCID \$9.50C	below universe (drops <\$8)	GTLB \$27C	Cleaner bearish thesis, better buffer, still in \$8–40 band
MARA \$10.50C	low SI confidence now	DBX \$28C	Mature stagnant SaaS > crypto miner volatility
NVTS \$10.50C	small-cap risk	DOW \$44.50C	Mega-cap cyclical weakness, 4× safer buffer
F \$11P	strong Apr earnings risk	PL \$35P	Space/defense structural tailwind, \$900M backlog
PINS \$15.50P	modest catalyst	SMR \$11.50P	Nuclear/AI data-center theme + 20% SI squeeze
HOOD \$62P	priced out of band	LUNR \$25P	NASA contract just won, \$1B revenue guidance
GM \$70P	priced out of band	RIOT \$16.50P	AI-pivot + BTC + 14% SI

Macro changes: - **GSRS improved 3.5 → 2.6** — put sizing upgraded from 2.5% (\$25K) to 5% (\$55K) per name - **VIX dropped 19.23 → 17.48** — continued market normalization - **Put doubles RE-ENABLED** (first time since early March) - **SPX at all-time highs** — strong bull regime, favors put-selling side

DATA SOURCES

- Yahoo Finance: full weekly-options universe (681 tickers), bulk quotes (678 successful), option chains for 199 tickers in \$8–\$40 band, 9,576 contract rows for 2026-04-24 expiry — data captured 2026-04-18
- NasdaqTrader options.txt: weekly-options universe derivation (04/24/2026 expiry heuristic)
- FRED: HY OAS (series BAMLH0A0HYM2), value 2.86% as of 2026-04-16
- CBOE: SKEW (141.82), VIX (17.48) via Yahoo ~SKEW, ~VIX

- NYSE: MOVE (65.69) via Yahoo ^MOVE
- Short interest estimates: compiled from MarketBeat / Fintel / Yahoo (aggregated in per-name web research, dated 2026-04-14 to 2026-04-17)
- Glassdoor: accessed 2026-04-18
- Delta estimates: Black–Scholes using $T=0.0137$ years (5 calendar days), $r=4.3\%$ (short-rate proxy), realized-vol proxy for IV
- Historical volatility rank: 1-year rolling 20-day realized-vol window

Raw data in this directory: baskets/2026-04-20/data/ - weeklys_universe.csv (681 rows) — full weekly-options universe - universe_quotes.csv (678 rows) — bulk quotes with market cap, avg volume, 52w - universe_8to40.csv (199 rows) — price-filtered subset - macro_quotes.csv — 18 macro instruments (SPY, ^VIX, ^SKEW, ^MOVE, etc.) - chains_2026-04-24_v2.csv (9,576 rows) — full chain data, all strikes - chain_summary_v2.csv (199 rows) — per-ticker IV/ATR/HV/best-strike summary - shortlist_calls_refined.csv / shortlist_puts_refined.csv — filter output - SPY_history.csv, GSPC_history.csv, VIX_history.csv — 6-month OHLCV

Basket loaded — ready to execute Monday 2026-04-20 open.

Next steps: 1. At open, verify all strikes, credits, and contract counts against live IBKR/Schwab chains — quotes were captured Friday after-close; Monday may reprice 2. Set 8 price alerts for double-down protocol (both sides now enabled at GSRS 2.6) 3. Monitor VIX intraday — if spikes above 25, reassess put side 4. Flag: put-side buffers all under $2 \times$ ATR target — defensive stops tighten to $1 \times$ ATR intraday breach 5. First profit-take check: Wed Apr 22 end-of-day ($T+2$) — target 50% credit capture

Liquidity flags (verified against live Yahoo chains): - **GTLB \$27C** — Friday close bid \$0.00 / ask \$1.15 (mid \$0.575); only 53 vol, 148 OI on this strike. Limit at \$0.57 may not fill; consider working \$0.40–\$0.50 limit at open or stepping to the more-liquid \$26C (\$0.74 credit) if fill is poor by 10:00 ET. - **SMR \$11.50P** — Friday bid \$0.23 / ask \$0.27, 838 vol / 901 OI — tight spread, deep book. \$0.25 limit should fill at or near mid. - All other names: spot-checks not run, but option volumes from the Friday chain pull are >300 contracts on the OTM side, suggesting workable liquidity. Verify each at open.

Sunday 2026-04-19 Refresh — Pre-Open Confirmation

Re-ran the full Yahoo pipeline (macro, 679-ticker universe quotes, 199-ticker \$8–\$40 chain pull for the 04/24 expiry, filter + refine) plus a public-screener TradingView weekly-universe pull. All 8 basket legs reconcile to live Yahoo to within $\pm \$0.005$ of mid (rounding) — no strike or credit needs to change.

Macro snapshot (re-pulled 2026-04-19): SPY \$710.14, SPX 7126.06, VIX 17.48 (unchanged from Friday close), SKEW 141.82, MOVE 65.69. GSRS inputs unchanged → **GSRS = 2.6**, full 5% sizing both sides with doubles enabled stays in force.

Live-chain spot check (8/8 legs verified):

Leg	Spot	Live bid/ask	Live mid	Basket cr	Drift	IV	Vol	OI
GTLB \$27C	\$21.42	\$0.00 / \$1.15	\$0.575	\$0.57	+\$0.005	195%	53	148
DOW \$44.5C	\$35.60	\$0.00 / \$2.15	\$1.075	\$1.07	+\$0.005	200%	4	31
DBX \$28C	\$24.27	\$0.00 / \$0.95	\$0.475	\$0.47	+\$0.005	130%	36	41
HIMS \$33C	\$28.82	\$0.50 / \$0.53	\$0.515	\$0.52	-\$0.005	122%	7,487	2,152
PL \$35P	\$38.48	\$0.60 / \$0.90	\$0.750	\$0.75	\$0.000	108%	161	2,462
SMR \$11.5P	\$12.65	\$0.23 / \$0.27	\$0.250	\$0.25	\$0.000	109%	838	901
LUNR \$25P	\$27.58	\$0.48 / \$0.68	\$0.580	\$0.58	\$0.000	115%	503	381
RIOT \$16.5P	\$18.11	\$0.21 / \$0.37	\$0.290	\$0.29	\$0.000	98%	1,040	699

Refreshed totals: \$68,070 total credit · \$437,894 total margin (43.8% of \$1M equity) · max-profit yield +6.81% weekly.

Liquidity follow-ups for Monday open: - **GTLB \$27C** is still the thinnest book (no live bid Friday close, 53 vol). Same \$0.40–\$0.50 working-limit guidance applies; fall-back to the \$26C (\$0.74 credit) remains the alternate. - **DOW \$44.50C** also shows a very wide \$0.00 / \$2.15 quote (4 vol / 31 OI). Work at \$0.80–\$1.00 limit and be patient; the \$43.50C carries ~\$1.08 credit at delta ~0.18 if liquidity is unworkable. - **DBX \$28C** book is similarly thin (no live bid, 36 vol). Refined screen suggests an alternate at \$25.5C / \$0.125 — the basket’s \$28C strike trades richer on credit and has a 4.4× ATR-equivalent buffer; recommend keeping the \$28C and patient working-limit at \$0.30–\$0.40. - **HIMS / PL / SMR / LUNR / RIOT** all have tight spreads and workable size — limit at mid should fill within a few minutes of open.

TradingView coverage note: sandbox Python is 3.10 and the bundled `polytheta-tradingview-downloader` requires 3.11 plus browser-cookie auth, so the full TradingView snapshot rotation did not run. A public-screener pull (679 tickers, 22 fundamentals/technical columns) was written to `data_trading_view/2026-04-19 21-50-16_tradingview_weeklys.csv`. Last full TradingView snapshot (with the rich calculated-fields catalog) remains the 2026-04-13 07:39 UTC archive.

Refreshed artifacts: - `baskets/2026-04-20/data/macro_quotes.csv` (re-pulled 2026-04-19) - `baskets/2026-04-20/data/SPY_GSPC_history.csv`, `VIX_history.csv` (180-day OHLCV) - `baskets/2026-04-20/data/universe_quotes.csv` (678 tickers) - `baskets/2026-04-20/data/universe_8to40.csv` (199 tickers, \$8–\$40 band) - `baskets/2026-04-20/data/chains_2026-04-19_11-737_contract_rows.csv` (11,737 contract rows) - `baskets/2026-04-20/data/chain_summary_v2.csv` (199 tickers) - `baskets/2026-04-20/data/shortlist_2026-04-19_81_names.csv` / `shortlist_puts_refined.csv` (69 names) - `baskets/2026-04-20/data/verify_live_2026-04-19.json` (per-leg live verification dump) - `data_trading_view/2026-04-19 21-50-16_tradingview_weeklys.csv` (TradingView screener subset)

Status: basket holds — execute as printed Monday 2026-04-20 open.

This section is SUPERSEDED. See “Monday 2026-04-20 Revision — Corrected Entry Prices + Earnings-Blackout Filter” below.

Monday 2026-04-20 Revision — Corrected Entry Prices + Earnings-Blackout Filter

Why the original basket needed a rebuild

Two methodology problems were caught before trading:

1. **Phantom entry prices.** The picker used $\text{mid} = (\text{bid} + \text{ask}) / 2$ from Yahoo’s Friday-close chain. Thinly-traded strikes carry stale after-hours asks with a bid of zero, so “mid” became fiction. The three call-side legs (GTLB \$27C, DOW \$44.5C, DBX \$28C) all had Yahoo bid \$0.00 on Friday — the reported \$0.57 / \$1.07 / \$0.47 credits were averages of zero and a ghost ask of \$1.15 / \$2.15 / \$0.95. A live ThinkOrSwim screenshot of the GTLB chain showed bid \$0.00 / ask \$0.05 — actual tradable credit would have been pennies, not \$0.57. Put-side legs and HIMS had real two-sided markets and were unaffected.
2. **No earnings-blackout filter.** Nothing in the original pipeline checked whether a ticker was going to report earnings between the sale date (Mon 2026-04-20) and expiry (Fri 2026-04-24). That’s a hard mandatory exclusion: earnings moves inside a 4-day short-option window are un-hedgable.

Fixes implemented

- Picker now requires **bid > 0** on every candidate strike — no phantom asks survive.
- Credit estimate switched from $(\text{bid} + \text{ask}) / 2$ to **bid** — the most conservative, actually-tradable number.
- Strike-level liquidity floor of **OI 25 or volume 25** added so we don’t pick a strike with a real bid but no market-maker presence.
- **Earnings-blackout filter:** if next earnings date from either TradingView’s `earnings_release_next_date` OR Yahoo `quoteSummary.calendarEvents.earnings.earningsDate` falls inside [2026-04-20, 2026-04-24] inclusive, the ticker is **ineligible** — no exceptions, no override.
- Live Monday-open Yahoo chain pulled for the top 25 candidates per side, then strikes re-picked using Monday-live bids (the Sunday snapshot was pre-open, prices have moved).

Scripts: `scripts/_rescreen_bid_earnings.mjs` (Friday-snapshot rescreen) and `scripts/_rescreen_live_monday.mjs` (Monday-live re-pick).

Earnings-blackout exclusions (9 tickers — ineligible)

Ticker	Next earnings (inside 04-20 → 04-24 window)
AAL	2026-04-23
AGNC	2026-04-20
CLF	2026-04-20
CMCSA	2026-04-23
DOW	2026-04-23 (was in original basket — now removed)
NLY	2026-04-21
NOK	2026-04-23
PCG	2026-04-23
T	2026-04-22

Bid-filter casualties from the original basket

Original leg	Friday bid / ask	Disposition
GTLB \$27C	\$0.00 / \$1.15	REMOVED (no tradable bid)
DOW \$44.5C	\$0.00 / \$2.15	REMOVED (earnings 04-23 — also blackout)
DBX \$28C	\$0.00 / \$0.95	REMOVED (no tradable bid)
HIMS \$33C	\$0.50 / \$0.53	Kept as candidate — stock rallied 28.82→31.39 on Monday, picker moved to HIMS \$28.5P (\$0.53 bid)
PL \$35P	\$0.60 / \$0.90	Candidate dropped on Monday — stock slid 38.48→37.26 pushing \$35P delta past the 0.22 ceiling; candidate in pool, not in top-4
SMR \$11.5P	\$0.23 / \$0.27	Valid bid — dropped out of top-4 on credit ranking
LUNR \$25P	\$0.48 / \$0.68	Valid bid — LUNR moved to candidate pool both sides; beaten on credit ranking
RIOT \$16.5P	\$0.21 / \$0.37	Valid bid — dropped out of top-4 on credit ranking

Revised basket — 4 calls + 4 puts, Monday 2026-04-20 live bids

Sizing rule unchanged: **target 5% of \$1M equity margin per leg** (naked Reg-T approx). Credits are **live Monday bids** — work limit orders at bid to bid+\$0.02 on entry.

CALL SIDE

Ticker	Spot	Strike	Bid (credit)	Delta	IV	ATR buf	Contracts	Leg credit	Leg margin	Next earnings
VKTX	\$35.19	38	\$0.36	0.188	79%	1.5×	109	\$3,924	\$50,009	2026-04-29
FIGR	\$36.34	40	\$0.35	0.174	93%	1.4×	115	\$4,025	\$50,025	2026-05-15
GLXY	\$25.94	28	\$0.34	0.215	87%	1.2×	144	\$4,896	\$49,939	2026-04-28
QBTS	\$21.06	23.5	\$0.30	0.185	109%	1.6×	189	\$5,670	\$50,085	2026-05-07

PUT SIDE

Ticker	Spot	Strike	Bid (credit)	Delta	IV	ATR buf	Contracts	Leg credit	Leg margin	Next earnings
HIMS	\$31.39	28.5	\$0.53	-0.195	116%	1.6×	128	\$6,784	\$50,150	2026-05-11
APLD	\$31.65	28.5	\$0.48	-0.175	115%	1.2×	137	\$6,576	\$50,141	no date (see note)
UPST	\$34.21	32	\$0.37	-0.188	76%	1.2×	100	\$3,700	\$50,020	2026-05-05
CIFR	\$19.21	17.5	\$0.34	-0.207	118%	1.2×	202	\$6,868	\$49,934	2026-05-05

Revised totals: \$42,443 weekly credit · \$400,304 total margin (40.0% of \$1M equity) · max-profit yield +4.24% weekly. (Prior bogus figure: \$68,070 credit / +6.81% — that math was fiction because three call legs had no tradable bid.)

Data-gap notes before entry

- **APLD:** Yahoo `calendarEvents.earnings.earningsDate` lists only 2026-04-08 (past) — no future date scheduled yet. Applied Digital's fiscal year ends May 31; the next report is typically mid-July (Q4 FY2026). **Verify manually on Investor Relations site before executing the APLD leg** — if an unscheduled pre-announcement appears within 04-20 → 04-24, the leg must be dropped and re-sized.
- **FIGR:** thin strike-level volume (7 contracts Monday morning, OI 61). Use a patient limit and be prepared for partial fill.
- **VKTX 38C:** 229 Monday volume, 617 OI — acceptable, but work a limit at the bid.
- **CELH \$37.5C** (was a top-3 candidate in the Friday rescreen) **collapsed to bid \$0.10 on Monday open** as CELH drifted lower — picker correctly dropped it out of the top-4.

Copy-paste limit orders (work at bid, step up to bid + \$0.02 if needed)
